SUMMARY

Security+ and Network+ certified IT professional with a healthcare background and hands-on lab work in Active Directory, identity and access management, endpoint and supply-chain security, and service desk operations. Builds Python tooling for access reviews and security triage. B.S. in Information Technology expected December 2026.

CERTIFICATIONS

CompTIA Security+ | CompTIA Network+ | ITIL 4 Foundation | LPI Linux Essentials | AWS Certified Cloud Practitioner

TECHNICAL SKILLS

Identity and access: Active Directory (Samba), LDAP, Kerberos, organizational units, security groups, RBAC, MFA, least privilege, provisioning and deprovisioning, access reviews, OAuth
Security: HIPAA safeguards, vulnerability triage, CISA KEV, MITRE ATT&CK mapping, dependency and supply-chain scanning, audit logging, evidence collection, incident escalation
Service desk: osTicket, ticket triage, troubleshooting, escalation, runbooks, onboarding and offboarding, password resets, account lockouts
Systems and tools: Windows, macOS, Linux, TCP/IP, DNS, DHCP, VPN, Microsoft 365, Google Workspace, Microsoft Entra ID, AWS IAM, Python, Git, Docker

TECHNICAL PROJECTS

Practice Trust Lab | Samba AD, Docker, Python github.com/itsnmills/practice-trust-lab

- Built a synthetic clinic lab with a Samba Active Directory domain, domain-joined endpoints, file shares, a mock EHR, and simulated AI-scribe data transfers to vendors.
- Wrote read-only Python collection and reporting tools, then planted a known-compromised npm dependency and simulated PHI copied outside the mock EHR to verify both were detected.

Cloud/IAM Access Review Analyzer | Python, OAuth (PKCE) github.com/itsnmills/cloud-iam-access-review-analyzer

- Built a local-first tool that normalizes Google Workspace, Microsoft Entra ID, and AWS IAM exports into deterministic access-review findings mapped to NIST and HIPAA controls.
- Generates remediation queues, owner action plans, and a findings dashboard; runs locally on synthetic sample data.

Service Desk Lab | osTicket, Samba AD, Docker github.com/itsnmills/service-desk-lab

- Built a self-hosted service desk with osTicket and a Samba Active Directory domain: organizational units, security groups, test accounts, lockout policy, and LDAP/Kerberos authentication.
- Completed six simulated support tickets covering provisioning, password reset, account lockout, access changes, offboarding, and remote administration; wrote a runbook for each.

Access Guardrails for AI Agents | Python github.com/itsnmills/Strands-PHI-Guardrails-Demo

- Built pre-action checks on role, purpose of use, BAA/vendor status, and sensitive-data patterns that allow, auto-redact, or block agent actions and write an audit log.
- Modeled six roles and 16 ALLOW/BLOCK evaluation cases with fictional patient data; the evaluation runs deterministically without calling a model.

EXPERIENCE

Delivery Associate | Amazon St. Louis, MO | 2023 - Present

- Troubleshoot scanner, mobile app, GPS, and building-access issues on routes of roughly 180 stops per shift; escalate unresolved problems with clear diagnostic detail.

Personal Trainer | The Exercise Coach St. Louis, MO | 2022 - 2023

- Coached clients one-on-one on a fixed schedule; maintained confidential client records and explained assessment results in plain language.

EDUCATION

B.S. Information Technology | Western Governors University Expected December 2026
B.S. Exercise Science | Maryville University 2022
