# NOAH MILLS

IT Support
St. Louis, MO · (636) 388-2491 · itsnmills@gmail.com
itsnmills.github.io · github.com/itsnmills · linkedin.com/in/noahmills1

## SUMMARY

Security+, Network+, ITIL 4 Foundation, and Linux Essentials certified. B.S. in Information Technology at WGU expected December 2026. Most of the hands-on work is a ticketed Active Directory lab and Python tools that map systems, vendor risk, and access decisions. Comfortable on Windows, Linux, and macOS.

## TECHNICAL SKILLS

**Support:** osTicket, ticket triage, escalation, resolution notes, runbooks, onboarding and offboarding, password resets, lockout investigation, remote administration
**Operating systems:** Windows, macOS, Linux
**Identity and access:** Active Directory, Samba AD, LDAP, Kerberos, RBAC, least privilege, MFA
**Networking:** TCP/IP, DNS, DHCP, VPN / Tailscale
**Tools:** Python, Git, Docker, CI, automated testing, Microsoft 365, Google Workspace
**Security:** Audit logging, access reviews, data-flow mapping, vendor review, HIPAA Security Rule control mapping

## CERTIFICATIONS

**CompTIA Security+** Certified **CompTIA Network+** Certified **ITIL 4 Foundation** Certified
**LPI Linux Essentials** Certified **CompTIA Project+** In progress

## TECHNICAL PROJECTS

**Service Desk Lab** | home lab · osTicket · Active Directory · Docker github.com/itsnmills/service-desk-lab

- Private lab with osTicket and Active Directory (Samba AD DC): OUs, security groups, synthetic users, lockout policy, LDAP/Kerberos.
- Six ticketed scenarios: **provisioning**, **password reset**, **lockout**, **access change**, **offboarding**, and **remote admin**, plus written runbooks.

**Small Practice Security Kit** | personal project · Python github.com/itsnmills/small-practice-security-kit

- Built a local-first Python workflow that turns intake data into system maps, vendor reviews, evidence gaps, and a prioritized 30/60/90-day remediation plan.
- Mapped 30 controls across five families and maintained a 103-test suite on synthetic data. Wrote the outputs so a non-technical owner can act on them.

**Access Guardrails for AI Agents** | personal project · Python github.com/itsnmills/Strands-PHI-Guardrails-Demo

- Built pre-action checks for role, purpose of use, contract status, and sensitive-data patterns, with allow, redact, or block paths and an audit log.
- Modeled six roles and 16 ALLOW/BLOCK eval cases. Tested on synthetic data only, without calling a model.

## EXPERIENCE

**Delivery Associate · Amazon** St. Louis, MO · 2023 – Present

- Troubleshoot scanner, mobile-app, navigation, and building-access failures on a high-volume route. Resolve what I can, escalate what I cannot, and document recovery for dispatch.
- Prioritize exceptions in real time while meeting route, service, and safety requirements.

**Personal Trainer · The Exercise Coach** St. Louis, MO · 2022 – 2023

- Kept confidential client intake, limitation, session, and progress records in a structured setting.
- Explained assessment results and next steps to people with different technical and health backgrounds.

## EDUCATION

**B.S. Information Technology · Western Governors University** Expected Dec 2026
**B.S. Exercise Science · Maryville University** 2022
