# NOAH MILLS

St. Louis, MO | (636) 388-2491 | itsnmills@gmail.com
itsnmills.github.io | github.com/itsnmills | linkedin.com/in/noahmills1

## SUMMARY

CompTIA Security+ and Network+ certified IT professional moving into a SOC or security analyst role. Builds lab networks to practice identity and access reviews, log review, and vulnerability triage, and writes Python tools that turn account and system data into clear findings. Founder of Velari, building websites and AI call answering for local businesses, plus a free security kit for small medical offices.

## CERTIFICATIONS

**CompTIA Security+ | CompTIA Network+ | ITIL 4 Foundation | LPI Linux Essentials | AWS Certified Cloud Practitioner**

## TECHNICAL SKILLS

**Security operations:** Log review, audit logging, incident escalation, vulnerability triage, CISA KEV, MITRE ATT&CK mapping, dependency and supply-chain scanning
**Identity and access:** Access reviews, Active Directory (Samba), LDAP, Kerberos, RBAC, least privilege, MFA, provisioning and deprovisioning, OAuth, Entra ID, AWS IAM
**Systems and cloud:** Windows, macOS, Linux, TCP/IP, DNS, DHCP, VPN, Microsoft 365, Google Workspace, Docker
**Tooling and process:** Python, Git, osTicket, ticket triage, runbooks, HIPAA safeguards, NIST control mapping

## EXPERIENCE

**Founder | Velari** St. Louis, MO | 2026 to Present

- Run a web and AI services business that sets up websites, hosting, DNS, and AI call answering with missed-call text-back, helping local businesses turn more calls and visits into booked appointments.
- Offer small medical offices a free, HIPAA-aligned security starter kit as the first step into Velari's paid security readiness review, helping them map where patient data lives and set staff, device, and vendor policies.

**Delivery Associate | Amazon** St. Louis, MO | 2023 to Present

- Troubleshoot scanner, mobile app, GPS, and building-access issues across about 180 stops per shift, escalating unresolved problems with clear detail.

**Personal Trainer | The Exercise Coach** St. Louis, MO | 2022 to 2023

- Coached clients one-on-one on a fixed appointment schedule and kept confidential client records.
- Explained assessment results and progress in plain language to clients of all backgrounds.

## TECHNICAL PROJECTS

**Practice Trust Lab** | *Samba AD*, *Docker*, *Python* github.com/itsnmills/practice-trust-lab

- Built a synthetic clinic lab: Samba AD domain, domain-joined endpoints, file shares, a mock EHR, and simulated AI-scribe data transfers to vendors.
- Wrote read-only Python collection and reporting tools, then planted a compromised npm dependency and copied PHI outside the mock EHR to test whether they caught it.

**Cloud/IAM Access Review Analyzer** | *Python*, *OAuth (PKCE)*

- Wrote a Python tool that turns Google Workspace, Entra ID, and AWS IAM exports into access-review findings mapped to NIST and HIPAA controls.
- Outputs remediation queues, owner action plans, and a findings dashboard from synthetic sample data.

**Access Guardrails for AI Agents** | *Python* github.com/itsnmills/Strands-PHI-Guardrails-Demo

- Designed pre-action checks on role, purpose of use, vendor BAA status, and sensitive-data patterns that allow, redact, or block an agent action and log it.
- Modeled 6 roles and 16 allow/block test cases with fictional patient data; runs deterministically with no model calls.

**Service Desk Lab** | *osTicket*, *Samba AD*, *Docker* github.com/itsnmills/service-desk-lab

- Ran 6 simulated tickets on an osTicket and Samba AD service desk, including lockouts and offboarding, with a runbook for each.

## EDUCATION

**B.S. Information Technology | Western Governors University** Expected December 2026
**B.S. Exercise Science | Maryville University** 2022
