SUMMARY

CompTIA Security+ and Network+ certified. B.S. in Information Technology at WGU, expected December 2026. Three years independently running a high-volume Amazon delivery route: troubleshoot, document, and close the loop without a supervisor standing there. Home lab with an Active Directory domain and a live ticket queue, where I work password resets, lockouts, new hire provisioning, and offboarding as documented tickets. Interested in health-system IT.

CERTIFICATIONS & EDUCATION

CompTIA Security+ — Certified

CompTIA Network+ — Certified

B.S. Information Technology — Western Governors University — Expected December 2026

B.S. Exercise Science — Maryville University — 2022

EXPERIENCE

Delivery Associate — Amazon, St. Louis, MO *2023 – Present*

- Independently run a high-volume, metrics-driven delivery route: triage problems on the spot, fix what I can, and escalate what I can't.
- Troubleshoot the route's tech on the road (handheld scanner, delivery phone and app, building and gate access), then document exceptions and recovery steps so dispatch and the next driver aren't starting from zero.

Personal Trainer — The Exercise Coach, St. Louis, MO *2022 – 2023*

- Explained health information in plain language to non-technical clients every day, and handled their personal health information carefully.

TECHNICAL SKILLS

Workstations: Windows, macOS, Linux, Microsoft 365, Google Workspace

Identity: AD account lifecycle in a home lab (Samba AD): provision, reset, unlock, group and OU changes, offboard

Ticketing: osTicket, written resolution notes, escalation when it is past Tier 1

Network: DNS, DHCP, TCP/IP, Wi-Fi (Network+)

Security: Security+, HIPAA and PHI awareness, phishing awareness

Tools: Python and SQL basics, Git

PROJECTS

Service Desk Lab *github.com/itsnmills/service-desk-lab*

- Self-hosted help desk environment on my own VPS: an osTicket queue and an Active Directory domain (Samba AD) in Docker, reachable only inside my private network.
- Service desk tasks worked end to end as documented tickets: new hire provisioning, password resets, account lockout investigation from the domain controller's auth logs, group-based access changes, offboarding.

Small Practice Security Kit *github.com/itsnmills/small-practice-security-kit*

HIPAA-readiness tool that maps where ePHI lives in a small practice and outputs a plain-language remediation plan. Runs on synthetic data; 77-test Python suite.
